Document Version:
Conference or Workshop Item

The aim of the Leeds Beckett Repository is to provide open access to our research, as required by funder policies and permitted by publishers and copyright law.

The Leeds Beckett repository holds a wide range of publications, each of which has been checked for copyright and the relevant embargo period has been applied by the Research Services team.

We operate on a standard take-down policy. If you are the author or publisher of an output and you would like it removed from the repository, please contact us and we will investigate on a case-by-case basis.

Each thesis in the repository has been cleared where necessary by the author for third party copyright. If you would like a thesis to be removed from the repository or believe there is an issue with copyright, please contact us on openaccess@leedsbeckett.ac.uk and we will investigate on a case-by-case basis.
Choosing treatment for localised prostate cancer: a patient-conducted-interview study

Peter Branney, Senior Research Fellow, Centre for Men’s Health, Leeds Metropolitan University
Steven Robertson, Reader, Centre for Men’s Health, Leeds Metropolitan University
Sunjay Jain, Consultant Urological Surgeon, St. James’ Hospital, Leeds

Participants have a role in the processes of the research:
- Learn interview techniques
- Devise an interview schedule
- Conduct an interview &/or are interviewed

Bringing together researchers and participants should build alliances:
- Participants better understand the complexities of research
- Participants more likely to engage with the study findings

The production of a data ‘set’ allows for:
- Analysis and re/secondary analysis
- A formal set of conclusions and recommendations for use in practice
- Conducting the interviews over a single day allows for:
  - A repeatable method
  - Resources focused on data collection rather than managing long processes of participation
  - Greater generalisability
  - Focus on under-represented groups

One day Patient-Conducted-Interview Workshop

Communicative rationality
- Propositional truth
- Normative value

Methods focus on processes to ensure that individuals are ‘involved’ through discussion, learning and decision making (although institutions rarely commit to such decisions)
- Citizen juries
- Planning cells
- Consensus conferences
- Citizen panels
- Deliberative polling

Inter-subjective rationality
- Multiple contested truths
- Hegemonic value

Methods usually adjunct to studies (particularly for dissemination), which recognise and bring together interest groups. Additionally, these methods may be used as a campaigning process to produce influence through the production of agreed statements or the alliance of interest groups.
- Advisory groups
- Expert symposia
- Researcher-participant groups

Action rationality
- Essential truth
- Positive value

Methods focus on equality of involvement (representativeness)
- Large scale (internet, telephone and mail) surveys
- Interview-administered surveys

Communal autonomy
- Patriotism
- National self-determination
- Sense of common ideals

Plural autonomy
- Group identities, interests, and beliefs
- Differences between groups

Individual autonomy
- Individual independence
- Freedom to choose or to opt out

Method focus on processes to ensure that individuals are ‘involved’ through discussion, learning and decision making (although institutions rarely commit to such decisions)
